Chatbot Rubric					
	1	2	3	4	5
Variety	Chatbot uses a variety of responses, but not based on user input.	Chatbot has special responses for certain types of input, but the responses rarely incorporate the input.	Chat bot recites information given to it by the user, in a few different ways.	Chatbot uses information provided by the user and responds in interesting ways.	Chatbot responds to user input in complex ways. For example it remembers parts of the earlier conversation, or the chatbot brings up new conversation topics based on previous conversations.
Originality	Chatbot functions only to the extent that was provided in class.	Chatbot expands on keyword responses, but only by adding more keywords, additional logic has not been added.	Chatbot is unique from other groups. There is evidence that the team members have worked together to integrate new features.	Chatbot has unique features, like emotions, but is limited to one or two unique responses.	Chatbot has unique systems such as playing games, expressing emotion, searching the internet, etc. These systems are complex and fully developed.
Polish	File does not compile	Compiles, but has runtime errors.	No compile or runtime errors, but major problems in logic or functionality.	Overall program is glitch free and well designed. Missing some organization or commenting, or has some code that is unreachable.	Program runs smoothly and effectively. Any user generated errors are caught and handled. Code is organized, well-commented, and easily readable.
